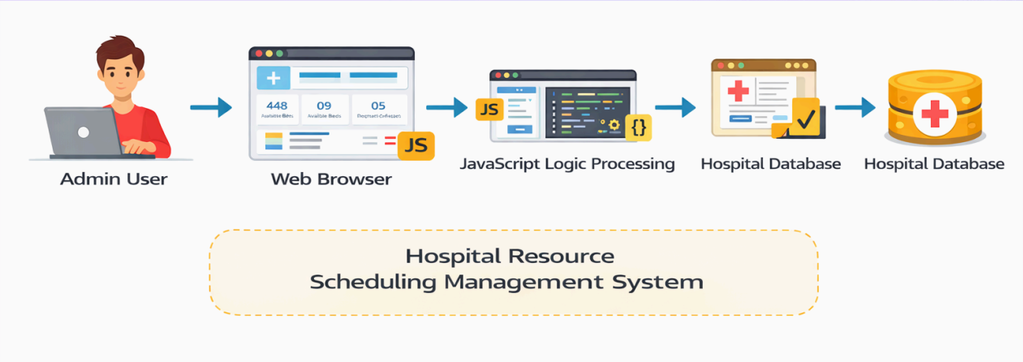
Hospital Resource Scheduling Management System

Project Based Learning from FWD

Abstract: The Hospital Resource Scheduling Management System is a web-based application that digitizes patient scheduling and hospital resource management.Developed using HTML, CSS, and JavaScript, it provides an interactive dashboard for efficient hospital operations.

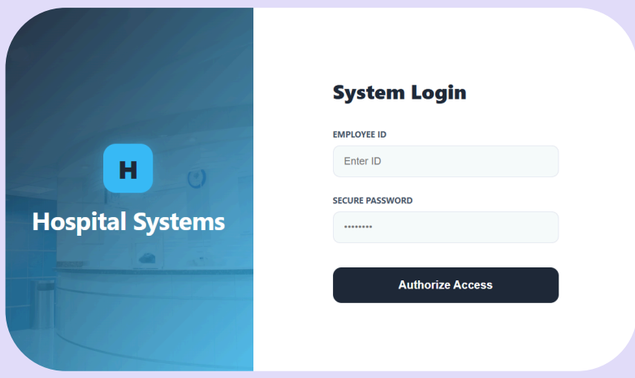
System Architecture:



CO Wise-Implementation:

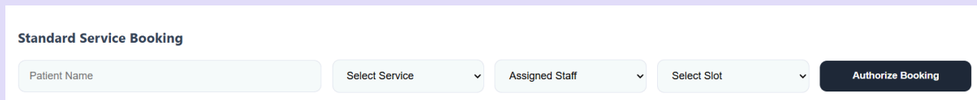
CO-1

- Designed login and dashboard pages using structured HTML



CO-2

- Implemented appointment booking and emergency resource request forms
- Used various input fields and form validation for user data collection



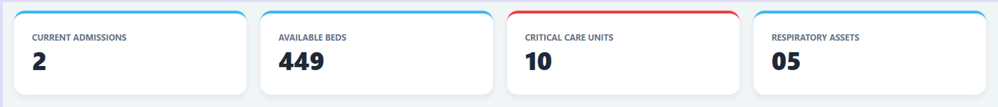
CO-3

- Used JavaScript arrays and objects to store patient and resource data

PATIENT ENTITY	TRIAGE CATEGORY
Hasini	STANDARD
Cardiac Arrest	CRITICAL

CO-4

- Implemented dynamic dashboard updates using JavaScript DOM manipulation



CO-5

- Used browser localStorage to store and manage hospital data

ASSIGNED STAFF	ALLOCATION / TIME	SYSTEM CONTROL
Dr. Meera Deshmukh	Slot: 11:00 AM	RELEASE
Dr. Sanjay Dutt	Cardiac Monitor	RELEASE

Conclusion & Future Scope

The Hospital Resource Scheduling Management System digitizes patient scheduling and resource management, improving hospital efficiency through a centralized dashboard. Future enhancements include cloud integration, online booking, and automated notifications.
